

What is the Target: Type 2 Diabetes Outpatient Program?

As part of the [Outpace CVD™](#) suite, the Target: Type 2 Diabetes program is a quality improvement and award achievement opportunity for organizations providing outpatient care related to type 2 diabetes and cardiovascular risk factors.

This initiative brings together quality improvement resources, regional AHA support, connections to patient and professional education, data tools, and award achievement opportunities to target improvement and acknowledge organizations for their impactful work.

Registered organizations will receive communications regarding events, recognition, education and science. Regional AHA staff are available to support your improvement journey. Recognized organizations may receive certificates of achievement, listing on our national websites, promotional materials, opportunities for best practice showcases, resources for self-promotion, and more.

Not. There are 6 modules (1-6) for the Target: Type 2 Diabetes program. The modules are: 1. Heart Failure, 2. Stroke, 3. Diabetes, 4. Atrial Fibrillation, 5. Peripheral Artery Disease, and 6. Chronic Kidney Disease. Hospitals that meet specific measure thresholds in these modules will have expanded diabetes related registry elements and reporting. Hospitals that meet specific measure thresholds in any of these modules may be eligible for recognition in the Target: Type 2 Diabetes Honor Roll alongside their existing CHS. With the Guidelines award.

All U.S. -

Data will be used to track success rates and improvement according to the Target: Type 2 Diabetes program structure. Organizations that commit to improving and submit all required information will be eligible to receive achievement awards on an annual basis. Only those who give AHA permission to recognize them publicly will have their award level published.
